- Slide 10.4 · Configurations

Part 11 — Every email in one place

Part 12 — How it is built (and what is not real yet)

- Slide 12.1 · Architecture, in plain terms
- Slide 12.2 · What is deliberately mock
- Slide 12.3 · Appendix — request status flow
- Slide 12.4 · Appendix — every gate, and what enforces it
- Slide 12.5 · Appendix — rough edges seen during this run
- Closing slide · The story in one paragraph

Amber CAPEX Portal — Full Walkthrough

A slide-by-slide tour of the whole product, captured from a real end-to-end run.

Every screenshot in this deck was taken from the running application on **30 July 2026**, driving the real UI: the FY 2026-27 budget was authored from a blank sheet, pushed through all three approval gates, spent against by two live requests, sourced from two vendors, split-awarded, and settled down to the last rupee. Nothing is a mock-up.

Product	Amber CAPEX Portal — capital-expenditure procurement for Amber Enterprises India Ltd
Scope of this run	1 plant (Jhajjar Plant 1), 1 fiscal year (2026-27), 2 requests, 2 vendors, 2 awards
Screens captured	87
Reference docs	CLAUDE.md (architecture) · USER_STORY.md (backlog) · SCOPE.md (scope)

Part 0 — The one-minute version

Slide 0.1 · What problem this solves

Amber spends capital across nine plants. Before this portal that money moved through spreadsheets, email threads and WhatsApp: a plant asks for a machine, someone chases quotations, someone else argues the price down, a third person raises the PO, and Accounts finds out last. Nobody could answer *"where is this request and who is sitting on it?"* without ringing four people.

The portal turns that into **one tracked pipeline with named gates**:

Two ideas make it work:

1. **Money is pre-allocated.** Every request must point at a *sub-particular* inside an approved budget head. You cannot spend what was never approved, and every screen shows allocated vs used.
2. **Outsiders act on emailed links, not logins.** Plant heads, the Technical team, both Accounts teams and every vendor work through single-purpose tokenised URLs. Only the buying/sourcing organisation gets a portal seat.

Slide 0.2 · The cast

Actor	How they get in	What they own
Buyer / requester (plant-scoped)	Portal login	Raises requests against their plant's budget
Maintenance	Portal login	Authors next-FY budget proposals
Sourcing team	Portal login	Vendors, RFQ, negotiation, auctions, award, trial review
Super admin	Portal login	Budget approval (admin stage), configuration, everything
Plant head	 emailed link	Approves budgets and requests
Technical team	 emailed link	Signs off the machine specification, per vendor
Plant Accounts	 emailed link	FA codes, then milestone payments
Global Accounts ("Satish")	 emailed link	Final budget sign-off; issues the PO
Vendors	 emailed link	Terms, quotations, bids, PI, PO download, trial

Slide 0.3 · The two halves

The product is really **two connected systems**:

- **Budget** — *how much may be spent, per plant, per head, per line item, per year.* Authored → plant head → admin → Global Accounts → published as the live FY master.

- **Procurement** — *spending it*. Request → approval → sourcing (RFQ or reverse auction) → technical sign-off → award → PI → FA codes → PO → payments → done.

Everything else (dashboards, adhoc transfers, TAT penalties, the accounts queue) hangs off those two.

Part 1 — Getting in

Slide 1.1 · Login

A single sign-in screen. In this build authentication is **mock**: the "Sign in as" dropdown *is* the identity — it writes the chosen role to the browser and the portal renders for that persona. There is no server, no password check, no session token.

Slide 1.2 · The five portal roles

Only five personas have portal seats:

- **Buyer · Jhajjar Plant 1** and **Buyer · Jhajjar Plant 2** — plant-scoped; they see only their own plant's data.
- **Sourcing Member** — runs quotations, auctions, awards.
- **Maintenance** — writes next year's budget.
- **Super Admin** — full access; the only role that can approve the admin budget stage or open Configurations.

Roles that used to exist — `plant_head`, `sourcing_head`, `accounts`, `plant_accounts` — were deliberately **removed**. Those people now work through emailed links (Parts 4, 6 and 9). If an old role is still stored in a browser the app clears it and bounces back to this screen, so nobody lands in a portal with no navigation.

Slide 1.3 · A clean slate

This run starts genuinely empty — zero requests, zero committed spend. The workspace navigation on the left is the whole internal product: Dashboard · New Request · Requests · Vendors · CAPEX Master · Budget Planning · Adhoc Budget · Budget Approvals · Accounts · Configurations. Each entry is role-filtered; a plant buyer sees fewer items than the super admin shown here.

Part 2 — The budget year

This is where the portal starts. Until a budget exists, no request can be raised, because every line item must point at an approved sub-particular.

Slide 2.1 · The live master starts blank

CAPEX Master is the register of approved money. It is organised in four tabs — **Brown Field** (existing plants), **Green Field** (new plants), **Digitisation**, **Information Technology** — and Brown/Green Field add a business-category step (**RAC · EMS · Component · Fan**) so a plant can run four independent budgets.

Right now every category reads "No items for FY". That is intentional: FY 2026-27 is about to be authored from scratch.

Slide 2.2 · Budget Planning — a blank draft

Budget Planning is where next year is written. Pick a category and plant, click **New Next-FY Proposal**, and you get a **deliberately blank draft** — the portal never pre-fills last year's lines, so each year is argued on its own merits. Set the **Target FY** (here 2026–27) and start filling.

Three ways to fill it:

- **Add Line** — type rows by hand.
- **Template** — download an Excel template.

- **Bulk Upload** — upload the filled workbook, in **Append** or **Replace** mode.

Slide 2.3 · The Excel template ships with worked examples

The downloaded template is not an empty grid. Its columns are exactly the ones the parser accepts — S.No · Head · Department · Sub Particulars · Qty · Total Cost (Cr) · Reason for Requirement · Benefits · ROI — and it arrives **pre-filled with real Jhajjar Plant 1 examples** spanning five heads, so the expected shape is never ambiguous:

Head	Department	Sub Particulars	Qty	Total (Cr)
Automation	HEX	HEX Black Copper Detection	3	0.33
Machinery	HEX	Shrink less Vertical M/C	1	2.10
General	IMM	Centralised Material Feeding for Molding Machines (24 Machine, 450T to 1300Ton)	1	1.50
Digitization	Innovation / Data Analyst	Plant ESG/EMS	1	0.40
New Business	Hex	Mezzanine, Goods Lift & Utilities	1	2.10
... (10 rows total, 5 heads)				

Note there is **no Rate column** — you enter **Total Cost (Cr)** directly. A downloaded template can be edited and re-uploaded unchanged.

Slide 2.4 · Bulk upload lands 10 lines across 5 heads

New Business		UC (Urban Company — already approved Nov 2025, balance shifted to FY26-27)	1	28.5

Submit to Plant Head moves the proposal to *With Plant Head* and mints a fresh single-use approval token. The author now sees an amber banner with two affordances — **Copy link** and **Preview email** — because *the portal does not send mail*; it composes it and hands you the link.

Slide 2.6 · The email

Recipient, subject and body are pre-written and editable; the secure link is spelled out in the body *and* offered as a copyable field with **Open link**. This same modal (`EmailPreviewModal`) is reused for every handoff in the product — five different emails, one component.

Slide 2.7 · What the plant head sees

The screenshot shows the "Plant Head Approval" interface for the "FY 2026-27 Budget". The interface has a dark theme. The table displays the following data:

SUB PARTICULARS	DEPARTMENT	QTY	BUDGET (Cr)
Automation - 2 lines			
HEX Black Copper Detection	HEX	3	₹0.33 Cr
Part Conveying system (Injection Machine to Mezzanine) (10 Machines)	IMM	1	₹1.05 Cr
Digitization - 2 lines			
Plant ESG/EMS	Innovation / Data Analyst	1	₹0.40 Cr
MES for water Purifier	Innovation / Data Analyst	1	₹0.20 Cr
General - 2 lines			
Centralised Material Feeding for Molding Machines (24 Machine, 450T to 1300Ton)	IMM	1	₹1.50 Cr
Declined Conveyors from Mezzanine to RAC Drop points	RAC	9	₹0.41 Cr
Machinery - 2 lines			
Shrink less Vertical M/C	HEX	1	₹2.10 Cr
Scissor Lifter	HEX	1	₹0.05 Cr
New Business - 2 lines			
Mezzanine, Goods Lift & Utilities	Hex	1	₹2.10 Cr
UC (Urban Company) — already approved Nov 2025, balance shifted to FY26-27	—	1	₹28.50 Cr
Total - 10 lines			₹36.63 Cr

No login. A dark public page titled **Plant Head Approval**, showing the proposal **grouped by head with every sub-particular** — department, quantity, budget — a subtotal per head, and a grand total. This is the same breakdown component every approver sees, so no two gates review different numbers.

Slide 2.8 · Approve, edit-and-send-back, or reject

N

SUB PARTICULARS	DEPARTMENT	QTY	BUDGET (Cr)
AUTOMATION - 2 lines			
HEX Black Copper Detection	HEX	3	₹0.33 Cr
Part Conveying system (Injection Machine to Mezzanine) (10 Machines)	IMM	1	₹1.05 Cr
DIGITIZATION - 2 lines			
Plant ESG/EMS	Innovation / Data Analyst	1	₹0.40 Cr
MES for water Purifier	Innovation / Data Analyst	1	₹0.20 Cr
GENERAL - 2 lines			
Centralised Material Feeding for Molding Machines (24 Machine, 450T to 1300Ton)	IMM	1	₹1.50 Cr
Declined Conveyors from Mezzanine to RAC Drop points	RAC	9	₹0.41 Cr
MACHINERY - 2 lines

NEW BUSINESS - 2 lines			
Mezzanine, Goods Lift & Utilities	Hex	1	₹2.10 Cr
UC (Urban Company — already approved Nov 2025, balance shifted to FY26-27)	—	1	₹28.50 Cr
Total - 10 lines			₹36.63 Cr

Approve Budget

Edit & Send Back

Reject

Three outcomes. **Edit & Send Back** is the interesting one:

N

HEAD	SUB PARTICULARS	BUDGET (Cr)
Automation	HEX Black Copper Detection	0.33
Machinery	Shrink less Vertical M/C	2.1
General	Centralised Material Feeding for Molding 1	1.5
Digitization	Plant ESG/EMS	0.4
New Business	Mezzanine, Goods Lift & Utilities	2.1
Automation	Part Conveying system (Injection Machine	1.05
Machinery	Scissor Lifter	0.05
General	Declined Conveyors from Mezzanine to R	0.405
Digitization	MES for water Purifier	0.2
New Business	UC (Urban Company — already approved	28.5
Total		₹36.63 Cr

+ Add line

Correction remark for the author (optional)...

Send Back for Correction

The plant head can **change the numbers themselves**, delete lines, add lines, and attach a correction remark — all applied atomically when they send it back. The author sees the edited lines *plus* the remark and resubmits, which restarts the cycle from the plant head with a rotated token.

Slide 2.9 · Approved

The token is burned on decision, so the link cannot be replayed.

Slide 2.10 · Stage 2 — the super admin

Budget Approvals is super-admin only. The proposal is now *With Admin*, expandable to the same full head → sub-particular breakdown. The admin can also **Edit & Send Back** or **Reject**. Approving does **not** publish — it moves to the third gate.

The proposal's ten lines are now `CapexMasterItem` rows on the live FY. Drill down **category** → **plant** → **budget head** → **line items**: RAC ₹36.63 Cr → Jhajjar Plant 1 ₹36.63 Cr → five head cards → the sub-particulars inside a head.

Two things to notice:

- The **padlock** on each row: a live Brown Field FY is **read-only**. You cannot quietly edit approved money. The only mid-year change is an *Adhoc transfer* (Slide 10.2), which itself needs admin approval.
- The **Sourcing** and **Req. No.** columns — once a request consumes a line, it shows here, so a budget row and its spend live side by side.

Budget flow, in one diagram

Either of the first two approvers can **edit & send back** → **needs_correction** → the author resubmits, which restarts from the plant head with a rotated token. Any gate can **reject**.

Vendor Master holds the onboarded supply base — code, category, GSTIN, contact, payment terms. Payment terms matter later: they generate the payment-milestone split (30/60/10 in this run). Sourcing can also add a **one-time vendor** on the fly during an RFQ, and flag them **foreign**, which switches on the Incoterms questionnaire.

[Back to requests](#)

New CAPEX Request

Choose a field type to begin.

Brown Field
Capex for existing plants — machinery, automation, utilities, and site improvements scoped by RAC/EMS/Component/Fan.

Green Field
New Green Field plant budgets — select plant, section, and head from CAPEX Master.

Digitisation
Digitisation capex from the dedicated Digitisation master (migrated from Brown Field Digitization).

Information Technology
IT capex — hardware, software, network, cloud, and support from the IT master.

Four field types, and the choice changes the whole route:

Field type	Meaning	Routing
Brown Field	Existing plants — machinery, automation, utilities	→ plant-head approval
Green Field	A brand-new plant	→ straight to sourcing
Digitisation	Digital/MES/ESG capex	→ plant-head approval
Information Technology	Hardware, software, network, cloud	→ plant-head approval

Business category → plant → budget head. The head cards **show the allocated budget** (₹1.38 Cr, ₹1.91 Cr, ₹30.60 Cr...) and heads with no approved lines simply don't appear. By the time you reach the grid you are already inside approved money.

Every step has **Back** and **Change ...** actions, and changing scope clears the dependent rows so you can never carry a line item across budget heads by accident.

Slide 3.4 · The line-item grid

Columns: **# · Head (locked) · Sub Particular\ · Qty\ · Allocated Budget (read-only). **The** Sub Particular is a dropdown of that head's approved lines** — it *is* the item's identity, and it carries the allocated figure with it. Beneath each row: a required **description** (this is the specification) and an optional **preferred vendor** with a reason.

Note the hint: "*Sourcing will obtain quotations via RFQ or reverse auction — buyers do not enter prices.*" Requesters describe *what* they need; sourcing discovers *what it costs*.

Review all items below. Once submitted, requests are routed immediately to sourcing.

ITEM 1

Shrink less Vertical M/C

Assembly Shop - Qty 1 - Jhajjar Plant 1

Shrinkless vertical hairpin expander for HEX shop — eliminates the copper shrinkage factor applied by a normal V-expander. Required spec: 1200 mm bed, servo-driven, PLC with recipe storage, Amber tooling interface.

Preferred vendor: **Tata Motors Ancillaries** — Existing HEX line supplier — tooling already matched to our hairpin geometry.
Assigned to Neha Kapoor

Allocated: ₹2,10,00,000

ITEM 2

Scissor Lifter

Assembly Shop - Qty 2 - Jhajjar Plant 1

Hydraulic scissor lifter for the coil pallet-to-conveyor transfer, 4000 coils/day, 1000 kg capacity, 1500 mm travel, foot-operated, safety skirt.

Assigned to Neha Kapoor

Allocated: ₹5,00,000

EMAIL PREVIEW

To: Neha Kapoor <sourcing@amberenterprises.in>

From: Super Admin <procurement@amberenterprises.in>

Subject: CAPEX Request — 2 Items submitted [30 July 2026]

Dear Neha Kapoor,

A new CAPEX request was submitted by **Super Admin** and assigned to you for sourcing. Please review and initiate vendor outreach at the earliest.

#	Item	Qty	Budget	Plant
1	Shrink less Vertical M/C	1	—	Jhajjar Plant 1
2	Scissor Lifter	2	—	Jhajjar Plant 1

Automated notification — Amber Enterprises CAPEX Portal

Create Another Request

View Submitted Request

View All Requests

A three-step wizard (Fill Details → Review → Submitted). Review restates each line with its allocation and preferred vendor. On submit the request gets a number, a sourcing engineer is auto-assigned (buyers never pick one), and the confirmation screen shows the **notification email** that went to sourcing with the item table inline.

Slide 3.7 · The request list

CAPEX Requests							
All requests — 1 request							
REQ. NO.	SUBJECT	STATUS	PLANT	FINALIZED	ASSIGNED TO	DATE	ACTION
CAP-2627-0001	Shrink less Vertical M/C 2 items	With Plant Head	Jhajjar Plant 1	—	Neha Kapoor	30 Jul 2026	View

CAP-2627-0001 · Shrink less Vertical M/C · 2 items · With Plant Head · Jhajjar Plant 1 · assigned to Neha Kapoor. Request numbers encode the fiscal year: CAP- 2627 -0001 = FY 2026-27, sequence 1. The subject is derived from the first line's sub-particular, so it is never blank.

Part 4 — Plant-head approval, by email

Slide 4.1 · The request detail while it waits

The detail page is the spine of the product. At this stage it shows:

- Both line items with **Allocated** and an **On budget / ₹X over** chip per line.
- The preferred vendor and the reason.
- An amber "**Awaiting Plant Head approval (sent via email)**" banner with **Copy link**, **Preview email**, and — for internal roles — direct **Approve / Reject**.
- The RFQ panel below, already waiting with **Invite vendors**.
- A **Status History** audit trail at the bottom, appended on every transition.

Slide 4.2 · The email and the public page

The plant head gets a compact card: request number, field type, plant, priority, the line items with quantities, and **Approve for Sourcing / Reject**. Deliberately minimal — this gate is about *"should we buy this at all?"*, not about price.

Part 5 — Sourcing: the RFQ

BUDGET SUMMARY

Allocated: ₹2,15,00,000

On budget

PREFERRED VENDOR

Tata Motors Ancillaries

Existing HEX line supplier — tooling already matched to our hairpin geometry.

Sourcing setup

Optionally require an item trial before you approve a vendor. Add vendors from the invite options below.

☐ Require an item trial before final payment — after the advance is paid, the awarded vendor uploads a trial video / photo / report for your approval; the final payment stays blocked until you approve it. Set this before approving the vendor.

RFQ — Request for Quotation

Vendors quote each line first. Counter online, set the per-line Final Decision, then accept — or escalate to a live auction.

Invite vendors (send link)

Invite new vendor

No vendors invited yet. Invite vendors to send them the quotation link.

STATUS HISTORY

Approval flips the request to **In Sourcing** and two new sections appear:

- **Sourcing setup** — one switch: **Require an item trial before final payment**. Tick it *now*, before awarding, and the last payment milestone stays locked until the vendor's trial is approved. (Ticked in this run.)
- **RFQ — Request for Quotation** — Brown Field is RFQ-first by default. A reverse auction can only be *escalated* from an RFQ, never started cold.

STATUS HISTORY

Q In Sourcing Plant Head (email) 30 Jul 2026, 14:05

With Plant Head Super Admin 30 Jul 2026, 14:03

The picker is titled "**Choose vendors & the documents each must approve.**" Per vendor you select which contracts go out:

- **Commercial Terms**
- **Performance Bank Guarantee (PBG)** — 10% of order value, held through warranty
- **Delay Liability Clause (DLC)** — the penalty regime
- **Payment Terms** (defaulted on for one-time vendors)

- **+ Add custom document** — any extra clause, by name and text

This is per-vendor, not per-request: a long-standing supplier and a one-time vendor can receive different packages in the same RFQ.

REVERSE AUCTION
CAP-2627-0001: Shrink less Vertical M/C

You are bidding as: Tata Motors Ancillaries [VND-001]

All prices in INR

First, Approve the Contract Terms

Please review and accept the documents below. Your quotation form unlocks once you accept.

Approval Documents

Please review and accept the following terms before this requirement proceeds.

Commercial Terms

These commercial terms govern the supply against this enquiry, including scope, quality, inspection, packing, freight, and warranty obligations as communicated by Amber Enterprises India Ltd.

Performance Bank Guarantee

Performance Bank Guarantee (PBG): The supplier shall furnish a Performance Bank Guarantee equal to 10% of the order value, valid through the warranty period, towards due performance of the contract. The PBG will be released on successful completion of supply, installation, and the warranty obligations.

Delay Liability Clause

Delay Liability Clause (DLC): A Turn-Around-Time (TAT) begins one week after the Proforma Invoice is raised. A deduction of 0.5% of the order value applies for every week of delay. Once cumulative deductions reach 5%, the deduction rate escalates to 5% of the order value per week thereafter. Deductions stop when the final payment is released.

You are bidding as: **Tata Motors Ancillaries** (VND-001)

All prices in INR

Approval Documents

The unlocked form mirrors the internal grid: # · Description · Qty · UOM · HSN/GST · Unit Price · Line Total , then **Additional Charges** (freight / packing / service), then **Delivery & Validity** (delivery lead time in days, warranty in years, currency).

The vendor picks the HSN code, not sourcing. HSN is a property of the *line item*, so once one vendor sets it, every other vendor's form shows it read-only and GST is computed identically for all of them — which is what makes the comparison honest. Sourcing can see the HSN but cannot override it.

Slide 5.6 · GST is computed per line

Scissor Lifter	Hydraulic scissor lifter for the coil pallet-to-conveyor transfer, 4000 coils/day, 1000 kg capacity, 1500 mm travel, foot-operated, safety skirt.	2	8428 GST 18%	₹2,60,000 Subtotal: ₹5,20,000 + ₹93,600 GST Total: ₹6,13,600 Lowest	₹2,32,000 Subtotal: ₹4,64,000 + ₹93,520 GST Total: ₹5,47,520 Lowest	PRICE (₹) 0 DISC % 0 Select vendor... Price × Qty: ₹0
Transportation / Freight				₹1,85,000	₹1,40,000	
Packing / Forwarding				₹45,000	₹60,000	
Service / Installation				₹1,50,000	₹1,20,000	
Delivery Lead Time (Weeks)				—	—	
Warranty (Years)				2	3	
Currency				INR	INR	

Now the grid earns its keep. Per line, the cheaper vendor is highlighted green with a ↓ **Lowest** chip — and they are **not the same vendor on both lines**:

Line	Tata Motors	Siemens India	Lowest
Shrink less Vertical M/C	₹2,05,00,000 (₹2,41,90,000 incl. GST)	₹2,12,00,000	Tata
Scissor Lifter	₹2,60,000	₹2,32,000 (₹5,47,520 incl. GST)	Siemens
Grand total	₹2,43,57,600 L1	₹2,58,83,520	

Footer rows compare freight, packing, service, delivery, warranty and currency. The **L1** badge marks the lowest whole quote.

Tata Motors Ancillaries

Existing HEX line supplier — tooling already matched to our hairpin geometry.

Sourcing setup

Optionally require an item trial before you approve a vendor. Add vendors from the invite options below.

Require an item trial before final payment

 — after the advance is paid, the awarded vendor uploads a trial video / photo / report for your approval; the final payment stays blocked until you approve it. Set this before approving the vendor.

RFQ — Request for Quotation

Vendors quote each line first. Counter inline, set the per-line Final Decision, then accept — or escalate to a live auction.

2 need review

Invite vendors (send link)

Invite new vendor

ITEM	DESCRIPTION	QTY	HSN / GST	VENDOR-001 Tata Motors Ancillaries View Profile Copy Link	VENDOR-002 Siemens India View Profile Copy Link	FINAL DECISION
Shrink less Vertical M/C	Shrinkless vertical hairpin expander for HEX shop — eliminates the copper shrinkage factor applied by a normal V-expander. Delivery Lead Time (Weeks)					—	
				2	+	

Counter turns one vendor's column into editable inputs — per-line unit prices *and* the footer charges. Here Tata's unit price is pushed from ₹2,05,00,000 to ₹1,98,00,000 and sent back.

3. **Escalate to a live reverse auction** — with the offer spelled out: *"The current best price (₹2,43,57,600) drops 5% to become the new price to beat, and every vendor's rank resets."*

Reopen negotiation

Documents Approved

Quotation & docs approved — approve & request PI in the Final Decision area below.

Reopen negotiation

The Final Decision column (Price / Disc / Vendor) records the negotiated award per line — the same as the reverse auction. Accept finalizes a vendor for the single-vendor Proforma Invoice & fulfillment.

TECHNICAL SPEC APPROVAL — REQUIRED BEFORE AWARD

Tata Motors Ancillaries

Attach the spec documents and send them to the Technical team.

Spec Not Sent

Prepare

Siemens India

Attach the spec documents and send them to the Technical team.

Spec Not Sent

Prepare

Pick a vendor and final price for each line in the Final Decision column to approve & request PIs.

Escalate to a live reverse auction. The current best price (₹2,43,57,600) drops 5% to become the new price to beat, and every vendor's rank resets — vendors must submit a fresh bid to reveal their rank.

Start Reverse Auction

NEGOTIATION HISTORY (5)

STATUS HISTORY

Both columns read **Quotation Approved + Documents Approved**, with *"approve & request PI in the Final Decision area below."* Price and paperwork are settled. One gate to go.

Part 6 — The technical specification gate

New in this build, and the most consequential change: you cannot award a vendor whose machine spec has not been signed off by Amber's Technical team.

Slide 6.1 · Why it is per vendor

Different vendors supply different machines, and a split award hands different lines to different suppliers. So the gate is **per vendor**, not per request. Both vendors start at **Spec Not Sent** — and `not_sent` blocks the award just as firmly as `rejected` does. The step cannot be skipped.

Slide 6.2 · Sourcing prepares the package

Per vendor: upload **the spec sheet the vendor supplied** (up to 6 files, ≤ 2 MB each — tagged "From vendor"), plus free-text **Notes for the Technical team**. The notes are where sourcing flags what to check:

*Model TMA-SVE-1200 (shrinkless vertical expander). Please verify: (1) 1200 mm bed matches HEX line pitch, (2) expansion force 120 kN is adequate for our 9.52 mm hairpin, (3) quick-change tooling mates with the Amber HEX standard interface, (4) NIL shrinkage factor is confirmed in writing. **Deviation from enquiry: vendor offers Siemens S7-1200 instead of the S7-1500 we specified.***

Slide 6.3 · Sent to the Technical team

Save and send happen in **one** pass, so the notes can never be lost between the two. The email carries the vendor, the document count, the notes verbatim, and the secure link.

Slide 6.4 · The Technical team's page

No login. They see the request, the vendor, the **requested** specification (the line-item descriptions), sourcing's notes, and the downloadable documents — then decide:

- **Approve Specification** → this vendor becomes awardable.
- **Send Back for Revision** → returns to sourcing with a **required** remark; sourcing revises and re-sends with a **rotated** token; the loop repeats.
- **Reject** → also requires a remark.

Specification Approved

Your approval has been recorded. Sourcing can now award this vendor and request their Proforma Invoice.

N

"Sourcing can now award this vendor and request their Proforma Invoice." The token is burned, so a stale link cannot re-decide.

Both specs now read **Spec Approved — this vendor can be awarded**, and the award bar offers:

- **Approve & Request PI — All (2)** — award every selected vendor at once, or
- **Approve & Request PI** per vendor — award Tata now, Siemens later.

It also reminds you: *"Item trial is ON — the awarded vendor(s) will upload a trial and the final payment is blocked until you approve it."*

Result — **two independent awards**:

Vendor	Lines	Award value (incl. GST)
Tata Motors Ancillaries	Shrink less Vertical M/C × 1	₹2,33,64,000
Siemens India	Scissor Lifter × 2	₹5,47,520

Each award now runs its own complete fulfilment track — its own PI, FA codes, PO, payment milestones, trial and TAT clock. The request header changes to **PI Requested · 0 / 2 awards complete**, and the request only reaches *Completed* when **every** award does.

Because the vendors already accepted the Commercial Terms, PBG and DLC to quote, there is **no post-award terms step**. Sourcing goes straight to requesting the Proforma Invoice.

Part 8 — The reverse auction

Run on a second request, CAP-2627-0002 (Centralised Material Feeding for Molding Machines, allocated ₹1.50 Cr), to show the other sourcing path end to end.

			ADD	
				Final Decision None - Stop Vendor Total

One form, four blocks:

- **Auction Dates & Times** — auction date, open time, close time, **bidder acceptance deadline**, and the **vendor revert expected by** timestamp.
- **Auction Rules** — bid validity (180 days), max decrements per bid (5), time extension (15 min, max 2 per bidder), currency.
- **Auction Configuration** — duration and **Threshold Price**, *pre-filled from the lowest RFQ quote (₹1,83,19,000) and editable*.
- **Generate & Send to Vendors**.

Slide 8.3 · The Business Rules document

The screenshot shows the 'CAPEX Detail' page in the CAPEX Portal. The left sidebar is the same as in Slide 8.2. The main content area shows a table with one item: 'Centralised Material Feeding for Molding Machines (24 Machine, 450T to 1300Ton)'. Below the table is a 'BUDGET SUMMARY' section showing 'Allocated: ₹1,50,00,000'. The 'COMPLETE DESCRIPTION' section provides details about the material feeding system. The 'Sourcing setup' section includes a checkbox for 'Require an item trial before final payment'. The 'Business Rules for Reverse Auction - Preview' section is expanded, showing the 'BUSINESS RULES FOR REVERSE AUCTION' document. The document includes the auction number (CAP-2627-0002), closing date/time (02/08/2026 12:00 Hrs), and the name of work (Centralised Material Feeding for Molding Machines (24 Machine, 450T to 1300Ton)). It also mentions that bidders are requested to go through the guidelines given herein below and submit their acceptance before the 01/08/2026 09:23 AM. The document is titled '1. Procedure of Reverse Auctioning:'.

BUSINESS RULES FOR REVERSE AUCTION
(Annexure - I)

Auction No: CAP-2627-0002 Closing Date/Time: 02/08/2026 12:00 Hrs

Amber Enterprises India Limited ('Amber') will be finalizing the rates for the procurement of **Centralised Material Feeding for Molding Machines (24 Machine, 450T to 1300Ton)** through Reverse Auction mode.

Name of Work: Centralised Material Feeding for Molding Machines (24 Machine, 450T to 1300Ton)
Bidders are requested to go through the guidelines given herein below and submit their acceptance before the **01/08/2026 09:23 AM**.

1. Procedure of Reverse Auctioning:

Response deadline, auction summary (item, date, opening and closing times), the four auction rules, then Commercial Terms, PBG and DLC in full, and the binding sentence:

→ **Approve & Participate / Decline Participation.**

Submit Bid

The vendor's auction screen is built around three figures:

Your Rank	"Submit a bid to see your rank" — ranks come only from real bids; escalation resets everyone
Best Price	₹1,48,72,250 — "Beat this to take L1"
Your Bid Total	live, with "Within threshold of ₹1,83,19,000"

Where ₹1,48,72,250 comes from. The lowest RFQ quotation was ₹1,56,55,000 (Tata: ₹1,48,00,000 + ₹3,20,000 freight + ₹85,000 packing + ₹4,50,000 service). The auction **opens at that minus 5%**. Thereafter it moves **only when a vendor actually beats it** — a bid above it leaves the opening price standing.

There is deliberately **one** price to beat, for the **whole quote** — no per-line best price. It is compared on an **INR basis**, so a foreign-currency bid can't be mistaken for the lowest.

Submit Bid

Bidding ₹1,40,00,000 base gives a bid total of ₹1,48,00,000 — under the best price, so this bid takes L1. Below the line, the vendor still fills the same charges/delivery/warranty fields, and GST is still derived from the line's HSN (₹25,20,000 here).

After the auction ends, sourcing awards through the **same per-line Final Decision column and the same split-award bar** as the RFQ path (Part 7) — including the same per-vendor technical-spec gate. The two paths converge completely from the award onward.

Part 9 — Fulfilment: from award to the last rupee

*Followed here for the **Tata award** (₹2,33,64,000). The Siemens award runs the identical track in parallel, with its own documents, tokens, PO and payments.*

Slide 9.1 · The vendor uploads the Proforma Invoice

The screenshot shows the Amber Reverse Auction interface. At the top, it says "REVERSE AUCTION" and "CAP-2627-0001: Shrink less Vertical M/C". Below this, it says "You are bidding as: Tata Motors Ancillaries [VND-001]" and "All prices in INR". The main content area has a header "Action needed — upload your Proforma Invoice." and a sub-header "Quotation Approved". The "Upload Proforma Invoice" section contains the following fields:

- PI Amount (₹)**: A text input field with the value "23364000".
- Proforma Invoice File ***: A file upload button labeled "Attach PDF / image (max 500 KB)".
- Note (optional)**: A text input field with the placeholder "Any remarks for the buyer...".

At the bottom of the form is a blue button labeled "Submit Proforma Invoice".

"Your quotation of ₹2,33,64,000 was approved. Upload your Proforma Invoice to proceed." — PI amount (pre-filled), the file, and a note to the buyer.

The screenshot shows the Amber Reverse Auction interface after the Proforma Invoice has been submitted. The main content area has a header "No action needed — waiting on Amber." and a sub-header "Quotation Approved". The "Proforma Invoice Submitted" section contains the following text:

Proforma Invoice Submitted

Thank you. Your PI has been sent to Amber's buyer and accounts team for PO processing and payment.

TAT Clock — Grace Period

Delay liability begins in 7 days (PI + 1 week). No deduction yet.

At the bottom right, there is a status bar that says "Proforma invoice submitted".

On submit, the **TAT clock** starts: "Delay liability begins in 7 days (PI + 1 week). No deduction yet." From here the DLC the vendor accepted becomes live arithmetic — 0.5% per week, cumulative cap 5%, then 5% per week, stopping when the final payment is released.

Award — Tata Motors Ancillaries: order value, the downloadable PI, an **Item Trial** card per award (*Awaiting Trial Upload*), the FA-code table, and the handoff banner — *"Awaiting Plant Accounts to assign FA codes on the emailed link. Plant Accounts act on the secure emailed link — no portal login."*

Internally this whole panel is **read-only**. Nobody with a portal seat can type an FA code or tick a payment; they can only see the state and re-send the link. That separation is the point.

Slide 9.3 · Email 1 — to Plant Accounts

Plant, vendor, order value, the ordered items, and the link. Body text spells out both jobs: *"assign the Fixed Asset (FA) codes ... and email Satish the PO link from that same page."*

Slide 9.4 · Plant Accounts, step 1 — FA codes

The rail advances to **2. PO (Satish)** and the panel keeps copy-link / re-send / open, so the handoff can be repeated without regenerating anything.

Slide 9.6 · Global Accounts issues the PO

Satish's page — a **different token on a different URL**; each page rejects the other's token outright, so one link can never do the other's job. He sees the PI and the FA codes, then enters the **PO number**, confirms the amount, and attaches the **PO document(s)**.

PO Issued · PO/JP1/2026/0091, with the remaining sequence restated: vendor re-uploads the PI → Plant Accounts tick the advance → trial → final payment.

Slide 9.7 · The vendor gets the PO

A **Purchase Order** card with number, amount, **Download PO Document**, and the issue timestamp — plus a **Re-upload Proforma Invoice against the PO** card, because a PI raised before the PO often needs to be reissued against it.

That window **closes on the first payment**. Once money has moved against the PI on file, revising it would change what was already paid.

Slide 9.8 · Payment milestones

The screenshot displays the 'Amber CAPEX Plant Accounts' interface. The main window shows the 'Shrink less Vertical M/C' account with CAP-2627-0001. It includes tabs for '1. FA codes', '2. PO (Satish)', '3. Payments', and '4. Done'. The '3. Payments' tab is active, showing a 'Field: Brown Field' and 'Plant: Jhajjar Plant 1'. The vendor is 'Tata Motors Ancillaries' with an order value of ₹2,33,64,000. A 'Proforma Invoice' of ₹2,33,64,000 is linked with file 'PI-TMA-2026-0417.pdf'. Below, the 'ORDERED ITEMS & FA CODES' section lists '1. Shrink less Vertical M/C - Qty 1' with FA-JP1-MC-2627-014. The 'PO(JP1/2026/0091)' section shows a PO value of ₹2,33,64,000 issued by Global Accounts (Satish), linked with file 'PO-JP1-2026-0091.pdf'. The 'PAYMENT MILESTONES' section lists three milestones: 'Advance (30% - On PO)' for ₹70,09,200, 'On Dispatch (60% - On dispatch)' for ₹1,40,18,400, and 'On Installation (10% - On installation) FINAL' for ₹23,36,400. The final milestone is marked as 'Blocked until the item trial is approved by sourcing.' The bottom shows 'Paid: ₹0' and 'Outstanding: ₹2,33,64,000'.

Milestones come from the vendor's payment terms:

Milestone	Share	Amount	Trigger
Advance	30%	₹70,09,200	On PO
On Dispatch	60%	₹1,40,18,400	On dispatch
On Installation FINAL	10%	₹23,36,400	On installation

The final one is visibly **locked**: *"Blocked until the item trial is approved by sourcing."* Not just greyed in the UI — the mutation itself refuses.

Ticking the advance stamps `advancePaidAt`, which starts the expected final-payment date calculation from the vendor's delivery lead time, and opens the trial.

Slide 9.9 · The trial

The screenshot shows a web interface for an 'Item Trial'. At the top, there is a blue button labeled 'Download PO Document' and a status message: 'PO received from Amber - Issued 30 Jul 2026, 14:41'. Below this is a 'Payment Status' section with a table:

Payment Status	
Advance (30%)	₹70,09,200 Paid
On Dispatch (60%)	₹1,40,18,400 Pending
On Installation (10%)	₹23,36,400 Pending

Below the payment status is the 'Item Trial' section, which has a yellow banner that says 'Awaiting Trial Upload'. It contains the instruction: 'Upload a trial video, photo, or inspection report of the item for sourcing to review.' There is a 'Choose file' button, a text input field with 'No file chosen', and an 'Optional note for sourcing...' text area. At the bottom of this section is a 'Submit Trial' button.

This screenshot shows the same 'Item Trial' form, but now it is in the 'Trial Under Review' state. The yellow banner has changed to 'Trial Under Review'. The 'Choose file' button is now disabled. A trial report has been submitted and is displayed in a box:

trial-run-SVE1200.png
Trial run completed at our Pune works on 28-Jul-2026. 200 hairpins expanded, zero shrinkage measured, cycle time 8.7 s. Inspection photo attached, full report follows by courier. Download

Below the trial report box, the 'Optional note for sourcing...' text area now contains the text: 'Trial run completed at our Pune works on 28-Jul-2026. 200 hairpins expanded, zero shrinkage measured, cycle time 8.7 s. Inspection photo attached, full report follows by courier.' The 'Submit Trial' button remains at the bottom.

"Upload a trial video, photo, or inspection report of the item for sourcing to review." The vendor attaches evidence and a note:

Trial run completed at our Pune works on 28-Jul-2026. 200 hairpins expanded, zero shrinkage measured, cycle time 8.7 s.

Part 10 — Trackers, admin and reporting

Accounts Queue

Track FA codes, purchase orders and milestone payments (one row per awarded vendor on split reverse auctions). Plant Accounts action these on their emailed link — open a request to copy the link or preview the email.

IN PROGRESS (0)

Nothing awaiting accounts right now.

COMPLETED (1)

REQUEST	SUBJECT	PLANT	VENDOR	STATUS	PAYMENTS
CAP-2627-0001	Shrink less Vertical M/C	Jhajjar Plant 1	Tata Motors Ancillaries	Completed	Paid ₹2,33,64,000

A **read-only** tracker (sourcing member + super admin), **one row per awarded vendor** — so a split award appears twice. Split into *In Progress* and *Completed*, with the paid figure. It answers "where is every rupee?" without granting anyone the power to move it.

Why is this reallocation needed?

Submit for Admin Approval

Requests · RAC

No adhoc requests yet for this scope.

The only mid-year change to an approved budget. Move money **from one head to another within the same plant and FY**: source head, destination head, amount in Cr, reason. It goes to the **super admin** for approval, and once approved it writes a per-head allocation override that the master honours instead of the summed line items.

Slide 10.3 · Dashboard

Plant filter, four KPI tiles (Total Requests · Total Budget · Active Requests · Negotiated Savings), the FY utilisation bar — **Allocated ₹36.63 Cr · Committed ₹2.15 Cr · Remaining ₹34.48 Cr, 6% utilised** — requests by status, requests by plant, and recent requests. Green means savings or headroom; red means over-budget. That colour rule holds across the whole product.

Slide 10.4 · Configurations

Super admin only. Four tabs — Plants, Categories, Users, System — for the reference data the rest of the portal depends on.

Part 11 — Every email in one place

The portal composes and previews mail; it does not send it. Each email carries a **single-purpose token** for exactly one job.

#	Trigger	To	Purpose	Token / page
1	Budget proposal submitted	Plant head	Approve / edit-and-send-back / reject a budget	approvalToken → /approve/...
2	Admin approves the budget	Global Accounts (Satish)	Final sign-off — publishes the FY	accountsToken → /approve/...
3	Request submitted	Sourcing engineer	Notification of a new request	(informational)
4	Brown Field / Digitisation / IT request submitted	Plant head	Approve the request for sourcing	approvalToken → /approve/...
5	Vendors invited	Vendor	Terms + quotation link	token → /supplier/...
6	Spec sent	Technical team	Approve the machine specification, per vendor	techSpec.token → /tech-spec/...
7	PI submitted	Plant Accounts	FA codes, then payments	poToken → /po/...
8	FA codes submitted	Global Accounts (Satish)	Issue the PO	poIssueToken → /po-issue/...

Tokens are CSPRNG-generated. Decision tokens (budget sign-off, technical spec) are **burned on use** and **rotated on re-send**, so a forwarded link cannot re-decide. The accounts tokens are not burned, because those pages are revisited across several steps.

Part 12 — How it is built (and what is not real yet)

Slide 12.1 · Architecture, in plain terms

Framework	Next.js 16 (App Router), TypeScript strict, Tailwind v4, shadcn/ui
Backend	None. Entirely client-side
State	One React context (<code>CapexProvider</code>) is the single source of truth
Persistence	<code>localStorage</code> key <code>capex_data_v2</code> for workflow state
Files	PIs, POs, spec sheets, trials, attachments live in IndexedDB , kept out of <code>localStorage</code> so the ~5 MB quota is never hit
Route groups	(<code>internal</code>) = authenticated portal · (<code>public</code>) = tokenised pages, no auth
Cross-tab	A <code>storage</code> listener re-syncs requests, invites, budget proposals and the master, so a decision made on a public page shows up in the portal tab

State transitions are enforced in the context, not just the UI: `ALLOWED_TRANSITIONS` rejects an invalid move and returns the record unchanged. The gates behave the same way — `awardAndRequestPi`, `finalizeSplitAward` and `requestProformaInvoice` all refuse a vendor whose technical spec is not approved, and `markPaymentMade` refuses the final milestone while a trial is outstanding. Disabling a button is the courtesy; the mutation is the rule.

Slide 12.2 · What is deliberately mock

Be clear-eyed about this when demoing:

- **Authentication.** Picking a role *is* logging in. No passwords, no server-side authorisation.
- **Email.** Composed and previewed, never transmitted. You copy the link and send it yourself.
- **Storage.** Per-browser. Clearing site data clears the portal. There is no shared database, so two people on two machines do not see each other's work.
- **Tokens.** Unguessable, but validated client-side against local data.
- **Currency.** A static FX table converts to an INR basis for comparison; no live rates.
- **No test suite.** `npx tsc --noEmit` is the verification gate, then `npm run build`, then role-switching smoke tests. (`npm run lint` is broken in this Next 16 / ESLint 9 setup.)

Everything *workflow* — the gates, the transitions, the tokens, the split awards, the arithmetic — is real and enforced. What is mocked is the plumbing around it.

Slide 12.3 · Appendix — request status flow

Green Field skips the plant head and enters `sourcing` directly. A **split award** keeps the request coarse — `pi_requested` while awards are in flight, `completed` once every award finishes — while each vendor runs `awarded → pi_requested → pi_submitted → accounts_processing → payment_in_progress → completed` on its own. Any stage from `pending_head_approval` onward can end in `rejected`.

For a **split award** the request status stays coarse — `pi_requested` while awards are in flight, `completed` once every award completes — and the granular chain (`awarded → pi_requested → pi_submitted → accounts_processing → payment_in_progress → completed`) runs per vendor.

Slide 12.4 · Appendix — every gate, and what enforces it

Gate	Who clears it	Enforced by
Budget — plant head	Plant head (email link)	<code>decideBudgetPlantHead</code> , <code>status-guarded</code>
Budget — admin	Super admin	<code>decideBudgetProposal</code> , <code>pending_admin</code> only
Budget — publish	Global Accounts (email link)	<code>decideBudgetAccounts</code> , <code>pending_accounts</code> only, token burned
Request approval	Plant head (email link)	<code>decideRequestPlantHead</code> ; Green Field skips
Contract terms	Vendor	Quote form gated until <code>docApprovalStatus = approved</code>
Incoterms (foreign vendors)	Vendor + sourcing	<code>incoTermsBlocksAward</code> folded into <code>canRequestPi</code>
Technical spec	Technical team (email link)	<code>techSpecBlocksAward</code> in all three award mutations
Auction participation	Vendor	<code>canStartAuction</code> needs ≥ 1 approval
Final payment	Sourcing (trial approval)	<code>finalPaymentBlockedByTrial</code> in <code>markPaymentMade</code>

Slide 12.5 · Appendix — rough edges seen during this run

Recorded honestly, because a walkthrough that hides them is not useful:

1. **Target FY must be saved before submitting.** Typing a new Target FY and clicking **Submit to Plant Head** in one go fails validation — the submit handler validates the *saved* proposal, so the new FY isn't seen yet. Clicking **Save Draft** first works. Worth fixing by validating the pending edits.
2. **Delivery lead time shows** — . Suppliers enter delivery in **days**, but the read-only quote summary and the comparison-grid footer row are labelled (*Weeks*) and render — . The value is captured; only the display is wrong.
3. **Line descriptions render twice** on the supplier quotation table.
4. **Native** `confirm()` **dialogs** guard Accept / Decline / Reopen / Start-auction. Fine for humans, but they block browser automation and can't be styled — an in-app confirm would be better.
5. **A Machinery head surfaces under a card labelled** `Assembly Shop` (a canonical-head mapping in `greenFieldConstants.ts`), which can read as a mislabel to a budget author.

Closing slide · The story in one paragraph

A maintenance engineer writes next year's budget from a blank sheet, uploads it as a spreadsheet, and it clears three independent gates — plant head, admin, Global Accounts — before a single rupee is spendable. A plant buyer then raises a request that can only point at money already approved. The plant head waves it through by email. Sourcing invites two vendors, who accept Amber's contract terms before they are allowed to see a price field, quote line by line with their own HSN codes, and get countered inline. Amber's Technical team signs off each machine on its own link. Sourcing splits the award across both vendors, and each award runs its own track: the vendor raises a PI, Plant Accounts code the asset, Global Accounts issue the PO, the vendor proves the machine with a trial, and the final 10% is only released once sourcing accepts it. Every handoff outside the buying team is a single-purpose emailed link, every gate is enforced in the data layer rather than the button, and every rupee is traceable from the budget line it came out of to the milestone it was paid against.
